FULL STACK SOFTWARE DEVELOPER

I am excited to launch into a software engineering career leveraging my recently acquired coding abilities, my knowledge of behavioral psychology, and the various skills I gained working as I completed my degree. In the short time I've been coding, I've found that my deep understanding of human behavior gives me a unique insight into the user perspective. My other transferable skills and interests include industrial/organizational psychology, technology in general, and a strong work ethic. I enjoy problem-solving, working with a team on a common goal, and creating something tangible through coding. I also love cats.
